

MOHIT

Data Scientist

Contact Number: +91 8858435070 Email: mohitsrivastava1231@gmail.com

LinkedIn: [linkedin.com/in/mohit-srivastava-63a94a1b8](https://www.linkedin.com/in/mohit-srivastava-63a94a1b8)

Professional Summary

Dynamic and innovative Data Scientist with a robust background in GenAI, Machine learning, Artificial Intelligence, and Data Analysis. Proven ability to lead cross-functional teams and deliver high-impact projects that drive organizational success. Adept at leveraging advanced data science techniques to solve complex problems and enhance decision-making processes. Highly motivated with a strong foundation in communication and problem-solving, eager to contribute to cutting-edge technological advancements.

Work Experience

Blenheim Chalcot

Associate Data Scientist

Mumbai, Maharashtra

June 2023 – Present

- **Machine Learning & Deployment:** Built and deployed ML models (XGBoost, Random Forest) to predict the best call times, boosting customer engagement by 25% and conversion rates by 20%. Managed model performance in real-time on CDE.
- **LLM Evaluation Tool:** Created a Python Library to quickly compare Language Models (LLMs), speeding up decision-making by 30% for choosing the best models.
- **RAG Chatbot Development:** Developed a chatbot using Retrieval-Augmented Generation (RAG) with Langchain and Vector Databases, integrated into Microsoft Teams. This increased employee engagement by 40% and cut query resolution time in half.
- **Virtual AI Call Agent:** Developed an AI-powered virtual call agent for a fintech firm using Twilio for automated calling and Eleven Labs for STT transcription. Automated EMI reminders and query resolution, improving response efficiency by 30% and reducing operational costs.
- **Intelligent OCR System:** Built an OCR system for a semi-government firm using Azure Document Intelligence and Python to digitize customs records. Automated data extraction reduced manual processing time by 80%, streamlining compliance and audits

Projects

Crop Disease Detector | Deep Learning Project

- Developed a **CNN model** to predict crop diseases from images of leaves.
- Employed **categorical cross-entropy** as the loss function and **Adam** as the optimizer, along with data augmentation and **transfer learning techniques**.
- Achieved **96%** accuracy in predicting crop diseases from leaf images.

Kaggle Classification Competition | Machine Learning Project

- Diverse Algorithm Implementation: Employed **Random Forest, SVR, and XG-Boost** for initial modeling, achieving a base accuracy of **79%**.
- Hyperparameter Optimization: Improved model accuracy to 80% using **GridSearchCV** for **hyperparameter tuning**.
- Deep Learning Integration: Incorporated deep learning methods, attaining a final accuracy of **82%** and securing a position within the competition's **top 500** participants.

Technical Skills

Languages: Python, SQL
Technologies: Flask
Concepts: Machine Learning, Deep Learning, GenAI, Prompt Engineering, LLM, Statistical Analysis, Data Analysis, Predictive Modeling, Natural Language Processing, Problem Solving, Data Structure and Algorithms , Fine-Tuning LLMs
Tools: Vector Databases, Microsoft Power Apps, Git, SQL Databases,Langchain , Langraph ,Multi-Agents

Education

Lovely Professional University Bachelor of Science in Computer Science (specializing in Machine Learning and AI) (CGPA: 8.2)	July 2020 - June 2024 Jalandhar, Punjab
Aditya Birla Public School Senior Secondary School (88.2%)	April 2019 - March 2020 Sonebhadra, Uttar Pradesh

Certificates

Python for Data Science - NPTEL
Supervised Machine Learning: Regression and Classification - Coursera
Advanced Machine Learning Algorithms - Coursera
TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning - Coursera
Convolutional Neural Networks in TensorFlow - Coursera
